Please read the inspection checklist carefully. Never seal off an opening unless you are certain that an animal will not be trapped inside. If you're in doubt, fill hole with newspaper (if not a fire hazard). If it remains undisturbed for 2-3 days in summer then the hole can be sealed. Animal Damage control work is an inexact science. Young may remain inside building but are unable to leave. The hole no longer is used because the adult(s) is/are dead. WDC is confident that other similar scenarios can be considered. WDC endeavors to provide a thorough inspection. However, we do not claim to have found every problem with your property. Diligent monitoring on your part is still important. If you have any questions, call before you act.

Remove

- Woodpile/stones
- Sticks/leaves
- Bird feeders
- Underbrush
- Tree branches
- Food stores
